

Appendix C: Sites Inventory

A. Introduction

State law requires that jurisdictions demonstrate in the Housing Element that the land inventory is adequate to accommodate that jurisdiction's share of the region's projected growth. The County has available residential development opportunities with sufficient capacity to meet and exceed the identified housing need.

The following sections provide details on the County's 2023-2031 Housing Element sites inventory. The opportunity areas consist of proposed developments, vacant sites, and underutilized sites to accommodate the RHNA. The identified areas involve sites that can realistically be redeveloped with residential units during the planning period. The sites chosen are significantly underutilized given their size and location. As market forces continue to push toward higher densities, recycling of underutilized land is expected to occur at an increasing rate. If the trend continues, the County can anticipate increased recycling of land, particularly in higher-density areas where economies of scale can be realized.

Sites to Meet the RHNA

Site selection to meet the RHNA includes underutilized, vacant, and non-vacant sites.

Underutilized Sites

Underutilized sites included in this inventory have been chosen based on the potential capacity increase available to property owners and thus the ability to realize economic gain.

For large commercial shopping centers, all or portions of such sites have been identified by selecting areas that have the potential for housing development. Large parking areas or commercial buildings with vacancies were identified for redevelopment. Based on the developable areas, these sites were reduced in capacity to approximately 85%. This reduction allows for commercial uses to remain under mixed use development. Reduction capacity vary by each commercial center based on available developable areas.

Vacant and Non-Vacant Sites

Site vacancy is a criterion used in identifying sites with potential for new development or recycling opportunities. The following section describes the criteria used in determining the suitability of vacant/non-vacant sites.

Methodology in Identifying Sites

The County's RHNA for the 6th cycle Housing Element is accommodated primarily on non-vacant sites. Existing uses on the sites are older or show signs of disinvestment or deferred maintenance, indicating a "ripeness" for private redevelopment. Key sites with existing uses that are "ripe" for redevelopment typically contain older structures and are underutilized given the development

potential afforded. Examples of existing uses include vacant commercial, office, and industrial buildings, and storage lots. Some sites with existing lower-density residential uses provide the opportunity for significant capacity increases.

Suitability of Sites

Table C-1 below presents recent developments in the county to identify land uses that have recently been recycled for development and other development trends. Recently recycled land uses include industrial, commercial, office, storage, and residential uses. Other key metrics used to evaluate recent development projects include floor area ratio (FAR) as a proxy for building intensity, the building-to-land (BLV) ratio, and age of existing structures.

Recent development projects show that development occurred on parcels with a FAR between 0.00–0.75, BLV ratio between 0.08–2.80 and building age between 28–122 years old; averages of the above metrics are 0.32, 1.17, and 68 respectively. The final metrics for determining the suitability of sites uses 75th percentile values to reduce the effect of outliers and account for a greater majority of available sites. These values are 0.40 FAR, 1.54 BLV, and buildings aged 50 years and above (year built \geq 1972).

In addition to the above metrics, developer/property owner interest to redevelop the site and parcel ownership were also taken into consideration when determining the suitability of sites. All aforementioned considerations were then coded in Table C-4 (Detailed Site Inventory) to provide substantial evidence that existing land uses do not constitute an impediment for additional residential use on the sites (pursuant to Assembly Bill 1397). These criteria are:

1. **Interest:** Developer interest or property owner interest to redevelop site.
2. **Vacant/Minimal Improvements:** Vacant lots, Vacant lot, parking lots, or open storage that includes only minimal-to-no existing improvements on site.
3. **Public Ownership:** Property under county or state ownership
4. **Existing Use:** Existing uses that are similar to uses that have been recycled (Industrial; Commercial; Office; Storages; Residential)
5. **Age:** Buildings 50 years and older (\geq 1972)
6. **Building Intensity** (Floor Area Ratio, FAR)³: Low existing FAR; 0.35 and under.
7. **Building/Land Value (BLV)⁴ Ratio:** 1.54 and under

Sites that meet criteria #1, #2, or #3, or sites that meet two or more of the remaining four criteria (#4 through #7) are included in the sites inventory.

Realistic Capacity

To determine realistic capacity assumptions for the county, recent development trends and their respective capacities were surveyed and the average calculated. Table C-2 presents the recent development projects surveyed with each project's theoretical and realistic capacity, as well as unit distributions per income level. The average realistic capacity for recent development projects is 85 percent of the theoretical capacity.

³ FAR = Floor-area ratio (building area/land area)

⁴ BLV = assessed improvement value/assessed land value

Consistent with HCD Guidelines, the methodology for determining realistic capacity on each identified site must also account for land use controls and site improvements.

- **Commercial Center Sites.** For large commercial center sites, the average realistic capacity of 45 percent was based on identifying developable areas of the site. These areas will allow for residential development from 30 to 45 dwelling units per acre.
- **Vacant Sites.** For many vacant sites, realistic capacity was determined by subtracting areas that are affected by natural resources, including wetlands and stream conservation areas, and as well as environmental constraints, including flooding, sea level rise, and steep terrain. For sites with steep terrain, the developable areas or flatter portions of the site were identified. On average, vacant site realistic capacity was calculated at 50 percent. The realistic capacity trend for building on steep terrain in Marin County is also 50 percent.
- **Religious Sites.** Religious institutions sites are sites with churches or other religious institutions, with excess vacant property or large parking lots, that could accommodate residential development. Only the portion of the vacant or parking area is used as a candidate housing site. All religious properties were reviewed. Sites with largest parking areas or surrounding vacant areas were selected or that could yield at least a half an acre when half of the property was calculated. In rural and inland areas, vacant lots appear to be used as parking areas. Half of the parking lot or vacant area (50 percent) were calculated toward housing units. Vacant areas with terrain constraints were either excluded or not selected from the analysis.
- **School Sites.** School sites with underutilized or unused areas or sites considered surplus by the school district that could accommodate residential development. Only the portion of the site considered underutilized or unused, or the entire “surplus” site, is considered a candidate housing site. Additionally, some school sites include buildings or recreational amenities that could or are currently being used as neighborhood amenities. These buildings and facilities were removed from the housing calculation analysis. Some school sites have development potential limited by environmental constraints such as flooding, sea level rise, and steep terrain. Based on existing environmental context and constraints, and to produce a realistic housing count, these sites were reduced in capacity by 50 percent and vary by each site.
- **Underutilized Nonresidential Sites.** For underutilized nonresidential sites, a realistic capacity of 75 percent was applied to sites based on the maximum allowed density based on recent trends and the assumption that development standards combined with unique site features may not always lead to 100 percent buildout

Accommodating Lower Income Sites

Density

Sites within the County Center and Baylands Corridors use residential densities at 30 dwelling units per acre or higher and are credited toward lower-income housing sites. The County Centered and Baylands Corridors are generally located along Highway 101 and adjoining incorporated cities where employment, public services, and infrastructure is generally more available.

Sites within the Rural and Inland Corridors use residential densities at 20 dwelling units per acre and are credited toward lower-income housing sites. Due to limited infrastructure and wide use of septic tanks, development over a density of 20 dwelling units per acres is generally restrictive due to spacing requirements for drain or leach fields. Assembly Bill 1537 lowered Marin County's default density to 20 units per acre.

Large and Small Sites

Consistent with updated Housing Element law (Assembly Bill 1397) related to the suitability of small and large sites, the lower-income sites inventory presented in this appendix is made up predominately of sites between 0.5 and 10 acres in size, as the State has indicated these size parameters are most adequate to accommodate lower-income housing need. Individual parcels under 0.5 acres in size are included only if they are part of a larger site based on common ownership.

Five sites over 10 acres in size are included in the inventory. In Marin County, development of lower income affordable housing on large sites is achievable and there is interest in redeveloping larger sites. In San Rafael, the Northgate Mall is currently undergoing entitlements to overhaul the mall to include 1,320 residences on a 45-acre [site](#). [Nearly](#) 10 percent of the housing units will be devoted to affordable housing.

- **Marin County Juvenile Hall.** The Marin County Juvenile Hall site consists of 33 acres and includes existing Probation Department facilities, Marin County offices, and an open recreational area. Marin County owns the site and facilities and will pursue affordable housing on a maximum of 10 acres of land on the site, while preserving recreational areas.
- **Nicasio Corporation Yard.** The Nicasio Corporation Yard is approximately 13.9 [acres](#). As a County-owned site, the County recognizes the important of adding affordable housing within the inlands areas of the County and will pursue such housing on this site.
- **Marin Gateway Center.** Marin Gateway Center is located along Highway 101 near the Donahue Street/Bridge Boulevard and Bridgeway on/off ramps. The site, consisting of 15 acres, includes existing commercial and retail uses. An approximately 1.5-acre portion of parking area and potentially vacant retail spaces can accommodate housing on the site.
- **San Domenico School.** The majority of the San Domenico School campus, over 522 acres, consists of school facilities and steep hillside terrain. There are a few areas of the school, each over 1 acre and less than 10 acres, that could allow for housing opportunities.

- St. Vincent’s School for Boys.** This site consists of three properties totaling over 315 acres of land. Large swaths of the property are constrained by sea-level rise and a floodplain along Miller Creek. The existing Catholic Charities facilities, setbacks from Highway 101, and surrounding hillside terrain also limit the developable areas on this site significantly. Approximately 40 acres of the site may be available for housing development and other uses. The Built Environment Element of the Countywide Plan includes policy and requirements to provide for affordable housing on this site.

Parcel Listing of Sites

The sites inventory is shown in **Table C-4**. **Table C-3** shows a listing of the sites inventory by parcel broken down by unincorporated communities consistent with the level of analysis throughout the Housing Element. Unincorporated communities are made up by census designated places (CDPs) as delineated by the U.S. Census. Some sites do not fall within the boundaries of a CDP within an unincorporated community but fall within the larger County Communities (North Marin, West Marin, Central Marin, Southern Marin). These sites are categorized under an “Other” heading in **Table C-4**.

Table C-3: Unincorporated County CDPs by Community

Community Name	CDPs Included
North Marin	
Black Point-Greenpoint	Black Point – Green Point
Marinwood/ Lucas Valley	Lucas Valley-Marinwood
West Marin
