

**RESOLUTION NO. 2018-136**  
**RESOLUTION OF THE MARIN COUNTY BOARD OF SUPERVISORS**  
**UPHOLDING THE NORTH MARIN WATER DISTRICT APPEAL AND CONDITIONALLY**  
**APPROVING THE NORTH MARIN WATER DISTRICT COASTAL PERMIT**  
**DRAKES VIEW DRIVE, INVERNESS**  
**ASSESSOR'S PARCEL: 114-120-09**

\*\*\*\*\*

**SECTION I: FINDINGS**

1. **WHEREAS**, the North Marin Water District has submitted a Coastal Permit application for the replacement of a previously destroyed 25,000-gallon water storage tank and an existing 50,000-gallon redwood water tank with a new 125,000-gallon concrete water storage tank and associated gate valves and overflow drain vaults on the 5,500 square-foot lot in Inverness. The proposed water tank is approximately 34 feet in diameter and would reach a maximum height of 20 feet, 8 inches above surrounding grade. The new tank is proposed to be located approximately 22 feet, 6 inches from the western front property line, 5 feet from the northern side property line, 22 feet, 6 inches from the southern side property line, and 22 feet from the western rear property line. Proposed building materials include earth toned, reinforced concrete proposed to mimic the visual appearance and patina of the existing redwood tank. The proposed water tank would modernize the current water treatment and storage capacity but would not increase the number of properties served by North Marin Water District facilities. The property is located at Drakes View Drive, Inverness, and is further identified as Assessor's Parcel 114-120-09.
2. **WHEREAS**, on September 13, 2018, the Marin County Deputy Zoning Administrator held a duly noticed public hearing and adopted a resolution conditionally approving the North Marin Water District Coastal Permit.
3. **WHEREAS**, on September 24, 2018, Ryan J. Patterson, on behalf of Jesse Colin Young, submitted a timely appeal of the North Marin Water District Coastal Permit approval.
4. **WHEREAS**, on October 22, 2018, the Marin County Planning Commission held a duly noticed public hearing to take public testimony and consider the project.
5. **WHEREAS**, on October 22, 2018, the Marin County Planning Commission partially denied and partially sustained the Young appeal and adopted a resolution approving the project with modifications.
6. **WHEREAS**, on October 30, 2018, the North Marin Water District, the project applicant, submitted a timely appeal of the Planning Commission's decision partially denying and partially approving the Young appeal and approving the project with modifications.
7. **WHEREAS**, on December 18, 2018, the Marin County Board of Supervisors held a duly noticed public hearing to take public testimony and consider the project.
8. **WHEREAS**, the Board of Supervisors finds that the bases of appeal are sufficient to overturn the Planning Commission's decision because there is adequate distance between the proposed tank and potential building sites at the Young's property at 25 Buck Point Road, and there would be opportunities for additional landscape screening to minimize potential visual

effects of the proposed tank. Therefore, a reduction in height would not be necessary and a condition of approval to fund landscape screening at 25 Buck Point Road will be required.

9. **WHEREAS**, an Initial Study has been prepared by the North Marin Water District pursuant to the requirements of the California Environmental Quality Act and qualified for a Mitigated Negative Declaration because any impacts on the environment identified in the record as potentially significant have been mitigated to a less than significant level. The North Marin Water District submitted a Notice of Determination and the Mitigated Negative Declaration to the State Clearinghouse on May 11, 2018 for a 30-day review period ending on June 11, 2018. No comments were received from state agencies.

10. **WHEREAS**, the proposed project is exempt from local land use permit requirements pursuant to Marin County Development Code section 22.06.05.F because the project involves the construction of a new tank for the storage of water by a local agency as provided by Government Code Section 53091(e); however, the project requires Coastal Permit approval pursuant to Marin County Interim Development Code 22.56.040.I because the project entails improvements to a public works facility in a coastal zoning district not otherwise exempt from Coastal Permit requirements pursuant to State Public Resources Code 30610(b).

11. **WHEREAS**, the project is consistent with the mandatory findings for Coastal Permit approval (Marin County Code Section 22.56.130I).

#### **A. Water Supply.**

The proposed development consists of the construction of one new water storage tank that would replace two existing redwood water storage tanks, one of which was previously destroyed in the 1995 Mount Vision fire, in order to improve the North Marin Water District's overall existing water conveyance system. The remaining tank is proposed to be removed following the construction of the new, proposed tank. The proposed water storage tank would continue to provide the storage of domestic drinking water and is equipped to be used for fire protection for existing development in Inverness. Moreover, the project does not entail the construction of any new water wells. Therefore, the project is consistent with this finding.

#### **B. Septic System Standards.**

The project does not entail residential development and the site does not utilize septic systems for sewage disposal.

#### **C. Grading and Excavation.**

The project entails the construction of a new water storage tank encompassing the footprint of a water tank previously destroyed by fire. The area of the proposed tank will require some grading and earthwork in order to prepare the site for a larger tank footprint and the construction of a berm proposed to reduce the visual appearance of the tank while providing a stable slope above the maintenance access pad around the tank. The grading will also result in a lower visual profile of the tank. The earthwork volume is approximately 190 cubic yards of cut and 20 cubic yards of fill, resulting in 170 cubic yards of cut proposed to be off-hauled. The project is proposed to utilize best management practices with regards to the removal and deposition of site spoils. Additionally, an erosion control plan would

occur in accordance with the standards as required by the Department of Public Works during the Building Permit review process; therefore, the project as proposed is consistent with this finding.

**D. Archaeological Resources.**

A review of the Marin County Archaeological Sites Inventory Maps on file in the Planning Division indicates that the subject property is in an area of no archaeological sensitivity and is already previously disturbed due to prior development. Moreover, pursuant to Section 22.56.130.D of the Interim Marin County Code, in the event archeological or paleontological resources are uncovered during construction, all work shall immediately cease, and the services of a qualified consulting archaeologist be engaged to assess the value of the resource and to develop appropriate response measures. Therefore, the project is consistent with this finding.

**E. Coastal Access.**

The project site is not located adjacent to the shoreline and the project would have no impact upon coastal access. Therefore, the project is consistent with this finding.

**F. Housing.**

The project would have no impact upon the availability of affordable housing stock within the Inverness Ridge community because it does not involve the removal of existing housing. Therefore, the project is consistent with this finding.

**G. Stream and Wetland Resource Protection.**

The project is not located within or adjacent to any sensitive streams or creeks; therefore, the project is consistent with this finding.

**H. Dune Protection.**

There are no natural dunes in the development area.

**I. Wildlife Habitat Protection.**

A search of the California Natural Diversity Database indicates that subject property is located in an area of sensitive wildlife resources. The Biological Site Assessment prepared by Leonard Charles and Associates, April of 2018 concluded that there would be no impacts to special status plants, significant wildlife, or special status natural communities because there are none located on or near the proposed project site. Additionally, the site has been previously disturbed and developed with an existing water storage facility consisting of two water storage tanks (one of which has since been destroyed by fire),

The report does mention that there is a possibility that the site could be utilized as a roost for western red bat and hoary bat, which are two bat species listed as a California Species of Special Concern, or for migratory bird nesting. The project has been mitigated so that the removal of any trees or other suitable habitat showing evidence of special-status bat activity will occur outside of the period least likely to impact the bats as determined by a

qualified bat biologist (generally between February 15 and October 15 if winter hibernacula are observed or between August 15 and April 15 if maternity roosts are present). Additionally, a pre-construction nesting bird survey would be performed prior to construction and the project would be assessed to establish a no-disturbance buffer area around nest sites. Therefore, the project is consistent with this finding.

**J. Protection of Native Plant Communities.**

A search of the CNDDDB mapping database indicates that the project site is within potential habitat for Mt. Vision Ceanothus (*Ceanothus gloriosus var. porrectus*), Swamp Harebell (*Campanula californica*), Marin Manzanita (*Arctostaphylos virgata*), and Western Leatherwood (*Dirca occidentalis*). The Biological Site Assessment conducted by Leonard Charles and Associates also notes that there seven special-status plants species that have a potential to occur. However, no special status species were identified on the site and are unlikely to occur due to the impacted nature of the site. Thus, there are no identifiable impacts to native plant communities resulting from the proposed project, and this project is consistent with this finding.

**K. Shoreline Protection.**

The proposed project is not located adjacent to the shoreline or within a bluff erosion zone.

**L. Geologic Hazards.**

The project site is located in a Seismic Shaking Amplification Hazard Area Zone 1 (least ground shaking amplification) and is not located adjacent to any streams which periodically flood or within close vicinity of any known fault lines. The Marin County Community Development Agency – Building and Safety Division would require seismic compliance with the California Building Code.

**M. Public Works Projects.**

The project entails the replacement of two existing redwood water storage tanks, one of which was previously destroyed by fire, with one new water storage tank. The water storage facility is a part of a greater water delivery system that provides domestic drinking water and fire suppression supply for Inverness. The project would improve existing facilities and would not be entail the development of new connections. Though the storage capacity would increase from an aggregate capacity of 75,000 gallons to 125,000 gallons, the increase would provide the minimum capacity necessary to serve existing development and to help ensure sufficient capacity in future dry weather and drought years. Any associated utility extensions associated with the project would not lead to an impact on existing utilities that already service the community. Therefore, the project is consistent with this finding.

**N. Land Division Standards.**

No land division or property line adjustment is proposed as part of this project.

**O. Visual Resources and Community Character.**

The project entails the construction of one 125,000-gallon water storage tank that would reach a maximum height of 20 feet, 8 inches above existing grade. The proposed tank would replace two water tanks, one of which was previously destroyed by fire. The remaining tank is proposed to be removed following the construction of the new tank. The existing utility distribution lines will remain underground.

The subject property is on a ridge lot adjacent to a neighboring residence located immediately northwest of the proposed tank site that has a direct view of the existing tank site and is also adjacent to a down sloping property to the northeast. The project has been mitigated to reduce the visual impact of the proposed tank to the neighboring residence at 420 Drakes View Drive, further identified as Assessor's Parcel 114-120-58, to a less than significant level. Per Mitigation Measure A-1, the tank will be constructed of colored concrete designed to mimic the visual appearance and patina of the existing redwood tank. Additionally, a berm will be established and landscaped with a mix of non-pyrophytic shrubs and trees native to Marin County. However, the project is located approximately five feet from the southern property line of the adjacent property at 25 Buck Point Road, further identified as Assessor's Parcel 114-120-72, and would be visually intrusive to the adjacent property.

To address these concerns, a condition of approval will require the applicant to provide a fund for additional landscaping at 25 Buck Point Road to further screen the structure. Therefore, as modified, the proposed development is consistent with this finding.

**P. Recreational/Commercial/Visitor Facilities.**

The project would not provide commercial or recreational facilities, and the project site is not governed by any zoning district or regulations which require a mixture of residential and commercial uses.

**Q. Historic Resource Preservation.**

The subject property is not located within any designated historic district boundaries of the Inverness Ridge Community as identified in the Marin County Historic Study for the Local Coastal Program. Therefore, the project is consistent with this finding.

**SECTION II: ACTION**

NOW THEREFORE, BE IT RESOLVED that the project described in condition of approval 1 is authorized by the Marin County Board of Supervisors and is subject to the conditions of project approval.

This decision certifies the proposed project's conformance with the requirements of the Marin County Development Code and in no way affects the requirements of any other County, State, Federal, or local agency that regulates development. In addition to a Building Permit, additional permits and/or approvals may be required from the Department of Public Works, the appropriate Fire Protection Agency, the Environmental Health Services Division, water and sewer providers, Federal and State agencies.

### **SECTION III: CONDITIONS OF PROJECT APPROVAL**

NOW, THEREFORE, BE IT RESOLVED that the Marin County Board of Supervisors hereby upholds the North Marin Water District appeal and approves the North Marin Water District Coastal Permit subject to the conditions listed below.

#### **CDA-Planning Division**

1. This Coastal Permit approval authorizes the replacement of a redwood water storage tank previously destroyed by fire and an existing 50,000-gallon redwood water storage tank with one 125,000-gallon water storage tank and associated gate valves and overflow drain vaults on the 5,500 square-foot lot in Inverness. The water storage tank is approved to be 34 feet in diameter and is approved to reach a maximum height of 20 feet, 8 inches above existing grade. The new tank is approved to be located approximately 22 feet, 6 inches from the western front property line, 5 feet from the northern side property line, 22 feet, 6 inches from the southern side property line, and 22 feet from the western rear property line. The approved water tank would modernize the water treatment and storage capacity but would not increase the number of properties served by North Marin Water District facilities.
2. Plans submitted for a Building Permit shall substantially conform to plans identified as Exhibit A, entitled "North Marin Water District Tank 4A Replacement Project," consisting of 19 sheets prepared by GHD, Inc. received in final form on July 03, 2018, and on file with the Marin County Community Development Agency.
3. BEFORE FINAL INSPECTION, the applicant shall provide written verification that a fund in the amount of \$5,000.00 has been provided to Jesse Colin Young, owner of 25 Buck Point Road, Inverness, for the planting of additional landscaping at 25 Buck Point Road.
4. The adjustment of the existing access easement for construction identified as "construction access" to a new access easement for construction identified as "construction access gravel driveway" on sheet 3 of 19 of Exhibit A shall substantially conform to this approval.
5. The project shall conform to the Planning Division's "Uniformly Applied Standards 2018" with respect to all of the standard conditions of approval.

### **SECTION IV: VESTING**

NOW THEREFORE, BE IT RESOLVED that unless conditions of approval establish a different time limit or an extension to vest has been granted, any permit or entitlement not vested within **two years** of the date of the approval, shall expire and become void. The permit shall not be deemed vested until the permit holder has actually obtained any required Building Permit or other construction permit and has substantially completed improvements in accordance with the approved permits, or has actually commenced the allowed use on the subject property, in compliance with the conditions of approval.
