

Southern Marin Fire Protection District

308 Reed Boulevard
Mill Valley, California 94941

Phone: 415 388-8182 Fax: 415 388-8181

June 17, 2019

Pat Randolph, Foreperson
Marin County Civil Grand Jury
3501 Civic Center Drive, Room #275
San Rafael, CA 94903

Foreperson Randolph:

At its regular meeting on June 18, 2019, the City Council reviewed the report "Wildfire Preparedness: A New Approach", dated April 25, 2019, and adopted the draft response by the City of Sausalito and the Southern Marin Fire District (attached). The report calls for a response from the City of Sausalito and Southern Marin Fire District to all but two of the recommendations. It does not require the City's response to the findings. However, recognizing the significant importance of this topic to all Marin residents, the Sausalito City Council and Southern Marin Fire District Board of Directors are choosing to respond to all of the report's findings and recommendations. Further, addressing the challenge of wildfire preparedness is a countywide task, and in the spirit of collaboration, Sausalito and Southern Marin Fire District representatives have joined representatives from all of Marin's affected agencies to prepare a comprehensive response.

Should the members of the Grand Jury require any additional information, please contact Fire Chief Christian Tubbs at (415) 388-8182, or Sausalito City Manager Adam Politzer at (415) 289-4166.

Sincerely,

Adam Politzer, City Manager
City of Sausalito

Christian Tubbs, Fire Chief
Southern Marin Fire District

A handwritten signature in black ink, appearing to read "Christian Tubbs".

Christian Tubbs, Fire Chief
Southern Marin Fire District

RESPONSE TO GRAND JURY REPORT FINDINGS AND RECOMMENDATIONS

City of Sausalito and the Southern Marin Fire District

REPORT TITLE: "Wildfire Preparedness: A New Approach"

REPORT DATE: April 18, 2019

RESPONSE BY: July 18, 2019

GRAND JURY FINDINGS

- We agree with the finding(s) numbered: **F2, 3, 5, 7, 8, 14, 18, 19.**
- We disagree wholly or partially with the finding(s) numbered: **F1, 4, 6, 9, 10, 11, 12, 13, 15, 16, 17, 20, 21, 22**

GRAND JURY RECOMMENDATIONS

- Recommendation(s) numbered: **R5, 6, 12**, has/ve been implemented.
- Recommendation(s) numbered: **NA** has/ve not yet been implemented and will be implemented in the future.
- Recommendation(s) numbered: **R1, 2, 3, 4, 7, 8, 9, 10, 11, 13, 15** requires further analysis.
- Recommendation(s) numbered: **NA** will not be implemented because it is/they are not warranted or reasonable.

RESPONSE TO GRAND JURY FINDINGS

F1. Existing vegetation management codes are both inconsistent and inconsistently enforced.

Response: **Partially Disagree**

Fire agencies policies differ as well as inspection and enforcement procedures.

In March 2019, the City of Sausalito ratified the Southern Marin Fire District Wildland Urban Interface (WUI) code, resulting in a singular code across the Fire District and City of Sausalito.

F2. There are not enough trained vegetation inspectors or fuel reduction crews.

Response: **Agree**

There are over 59,000 parcels in the Wildland Urban Interface Areas within Marin County agencies who are utilizing a variety of methods and resources to inspect as many structures as possible but are only pro-actively inspecting a small percentage of the total.

In November 2018 the citizens of the Southern Marin Fire District passed a parcel tax. Approximately one-third of the revenues generated from this tax measure have been dedicated to wildfire risk reduction programs and services beginning with the 2019/2020 Fiscal Budget. A portion of these revenues dedicated towards wildfire reduction are directed towards vegetation inspections.

F3. Current vegetation enforcement procedures are slow, difficult and expensive.

Response: **Agree**

Although each municipality has its own code enforcement procedures, a consistent countywide approach would allow for a more efficient and effective enforcement effort.

F4. Government agencies and safety authorities cannot currently manage vegetation on public lands.

Response: **Partially Disagree**

While municipal governments do not have authority beyond their own jurisdiction, a coordinated countywide effort could help bring focus and consistency, as well as potentially additional resources, to enhance existing efforts on public lands.

Government agencies and safety authorities can and do manage vegetation on public lands over which they have jurisdiction to the extent that resources and funding are available. Much more can be done, which is one of the many reasons the Marin cities, towns, fire agencies and

County have formed a working group to explore the creation of a countywide wildfire prevention program to be funded by a parcel tax on the March 2020 ballot.

F5. All property owners are responsible for vegetation management on their property, yet they are not sufficiently educated about vegetation management and many do not have the physical and financial resources to create defensible space.

Response: **Agree**

Although education has been provided through individual fire agencies and FIRESafe Marin, we agree that education efforts need to be understood by broader sections of the community. Grant programs should be considered for those that may not have the physical or financial means to complete necessary work.

F6. Wildfire preparedness education is inconsistent and fails to reach most citizens, especially parents of young children.

Response: **Partially Disagree**

Education is offered in a consistent fashion countywide by the fire agencies and FIRESafe Marin. The demographics of our hosted meetings/forums and exercises generally lack a younger demographic - especially parents of young children. Agencies need to create new forms of outreach to garner participation from this demographic.

F7. The most effective method of education is person to person in neighborhoods.

Response: **Agree**

Defensible space home evaluations with a trained professional is the preferred and best method for educating the public and greater community.

F8. Although Marin has 30 plus Firewise neighborhoods, the most in California, they only cover a small percentage of population and land.

Response: **Agree**

Firewise Communities are a great mechanism for bringing communities/neighborhoods together. They provide an organized approach to reducing hazards and risks.

F9. Sufficient public funds have not been provided to sustain comprehensive wildfire preparedness education.

Response: **Partially Disagree**

Generally, fire agencies are funded for the response and mitigation of emergency incidents. Development into the WUI, climate change and recent major fires are requiring resources greater than those available by local municipalities.

In November 2018 the citizens of the Southern Marin Fire District passed a parcel tax. A portion of the revenues generated from this tax measure have been dedicated to wildfire risk reduction programs and services beginning with the 2019/2020 Fiscal Budget.

F10. Educating the public requires a different set of skills than firefighters usually have.

Response: **Partially Disagree**

Firefighters have experiences that add value to educating the public; however, they also have other pressing responsibilities. Dedicated public education staff and defensible space home evaluators can spend more quality time on task than Firefighters.

F11. Any hesitation to use the WEA system can be deadly even if its alerts might reach people outside of its intended target zone.

Response: **Partially Disagree**

All appropriate emergency alert systems should be used to the fullest capacity as soon as possible depending on the conditions and needs to maximize safety. The WEA system is not geographically specific and can bleed over to areas where evacuations are not necessary. This could result in adding unnecessary traffic to already congested roadways impeding evacuation egress of those most affected. We agree it is a useful tool, but it must be well-coordinated between the incident commander and Sheriff’s Office of Emergency Services.

F12. Alert Marin sends the most accurately targeted warnings to endangered populations, but it reaches too few residents because it is not well publicized. Both Alert Marin and Nixle require opt-in registration, a serious design flaw.

Response: **Partially Disagree**

Nixle and Alert Marin are two very different systems. Nixle, by design, is an “opt-in” solution providing general information to the public. Alert Marin is an emergency notification system. Nixle and Alert Marin information is publicized at almost every community event hosted by Fire Departments and Sheriff-OES, with information also available on social media and agency websites.

Listed and unlisted/blocked Marin County landline and VoIP (Voice over Internet protocol) phone numbers are already included in our emergency notification system (Alert Marin), unless the owner specifically requests to have their phone number opted-out. Cell phone numbers are not included in Nixle and do require registration in our Self-Registration Portal. We agree that

more of our residents need to “opt-in” with their cell phone numbers. Additionally, we support changes in State law mandating that cellular information be accessible with an “opt-out” provision like landlines and VoIP data. We are also pursuing newly available authority to cooperate with utility companies to obtain customer cell phone numbers for these purposes.

We will work with legislators to support bills like SB 46 (Hueso; 2019) which would allow local governments to enter into agreements to access resident cell phone contact information for enrolling county residents in a county-operated public emergency warning system.

F13. Sirens could be a useful and reliable warning system if their numbers and locations were increased to broaden their reach and if they were enhanced with a customized message through LRAD.

Response: **Partially Disagree**

Long Range Acoustical Device (LRAD) is the name brand of one type of acoustical notification system. As an outdoor alerting system, LRAD can operate as a siren to improve the public's situational awareness, as well as provide real time instructions (separate from the cellular network which can often fail/overload during emergency) that can enhance community evacuation. Under certain conditions, the system may have limited reach and limited ability to be heard, however, acts as an additional alerting redundancy. Like with any system there are limitations, our local testing provided positive results based on topography and other outdoor existing noise.

F14. In the WUI and in many town centers, infrastructure and roads are inadequate for mass evacuations.

Response: **Agree**

The current infrastructure offers sufficient challenges if all residents must leave at the same time. There are a multitude of variables that contribute to evacuation failures to include transportation infrastructure shortfalls. Because of this fact, we have planned and continue to adapt to the current conditions that enable citizens to move away from harms way in an orderly fashion. The identification/utilization of Community refuge Areas (pre-identified intermediate neighborhood specific evacuation stopping areas) for the public is one such adaptation when conducting mass evacuation.

F15. Evacuation routes are dangerously overgrown with vegetation and many evacuation routes are too narrow to allow safe passage in an emergency.

Response: **Partially Disagree**

Though Marin County has many narrow roads with limited access and overgrown vegetation, not all roads and evacuations routes could be characterized as “dangerously overgrown with vegetation”. Much of the vegetation encroachment into the road right of way is the responsibility of homeowners. Public works agencies regularly work with fire agencies identifying and working in the most critical areas.

F16. Emergency planners often do not publicize evacuation routes due to their mistrust of the public.

Response: **Disagree**

In 2009 the Marin County Fire Agencies developed mutual threat zone maps, pre-identifying primary and secondary evacuation routes as well as evacuation zones. This information is available for first responders to access in conventional paper maps or online. It has also been made available to mutual aid responders outside of Marin County. Fire agencies are in the process of making these maps publicly available.

We do caution residents to take personal responsibility and identify and regularly travel different routes away from their home. Wildland fires can be very dynamic and depending on wind and topography can change direction with little to no warning. A pre-identified evacuation route may not be the safest route for residents to take deepening upon the specific type and location of the incident.

F17. Town councils, planners, and public works officials have not addressed traffic choke points, and, in some instances, they have created obstacles to traffic flow by the installation of concrete medians, bump-outs, curbs, speed bumps, and lane reductions.

Response: **Partially Disagree**

Although we agree that more needs to be done, we do not agree that public officials have not attempted to address these issues to date. Additionally, while we agree that traffic flow in an evacuation warrants renewed attention in our circulation planning, many of the elements labeled as “obstacles to traffic flow” by the Grand Jury are intended to increase public safety on a daily basis under regular conditions. Each agency must weigh these daily safety concerns against the use of roads during an evacuation.

F18. No studies have been performed to determine how long it would take to evacuate entire communities via existing evacuation corridors.

Response: **Agree**

The fire chiefs are exploring opportunities with technology companies and higher educational institutions studying this type of work. Large scale evacuation planning needs further development within Marin.

F19. The implementation of traffic-light sequencing and coordination to allow mass egress, and the conversion of two-way roads into one-way evacuation routes to ease traffic congestion, are dangerously delayed and years away from being implemented.

Response: **Agree**

Large scale evacuation planning needs to identify which corridors would benefit greatest from contra-flow. Coordination with public works agencies and identification of funding sources would be needed to make this a reality.

F20. Public transit is a neglected asset of emergency response preparedness: all operators except one transit agency are left out of the command structure and none is integrated into the emergency radio communication system MERA.

Response: **Partially Disagree**

Use of the term “neglected” suggests an active decision to exclude transit from emergency response preparedness. The current arrangements reflect an assessment by transit officials of their ability to respond to disasters. Many of these protocols reflect planning for a broad spectrum of disasters that might occur, and it would be appropriate to revisit these protocols for the “new normal” concerning wildfire preparedness and response to an event concentrated in Marin County.

F21. A bureaucratic culture of complacency and inertia exists in Marin. Government often fails to act quickly to repair known gaps in emergency preparedness, to think flexibly, and to prioritize safety in its planning and policies.

Response: **Disagree**

Marin’s fire agencies work exceptionally well together and have for many years; most recently a coordinated effort between the cities, towns and fire agencies to hire a countywide disaster coordinator is evidence of this success.

We agree that more needs to be done to address this critical public safety issue in the face of what now is commonly referred to as the “new-normal.” Accelerating climate change has led to larger, costlier, and more frequent wildfires in the state than ever before, burning almost year-round. Because of this, all fire agencies, the County, cities and towns are working together to explore the creation a countywide wildfire prevention program.

F22. No countywide comprehensive, coordinated policies have been made and no funds have been allocated to prepare for wildfires.

Response: **Disagree**

Grand Jury Report Findings and Recommendations
“Wildfire Preparedness: A New Approach”
June 18, 2019

There are several coordinated documents, policies or procedures within Marin County including: Mutual Threat Zone Plan, Community Wildfire Protection Plan, and the 2017 North Bay “Lessons Learned” report. All of Marin’s agencies are evaluating their budgets and making difficult decisions to make more money available for wildfire preparedness. It is our belief that a stream of revenue dedicated to this purpose is the best route to addressing the resource needs identified in these documents.

RESPONSE TO GRAND JURY RECOMMENDATIONS

The Marin County Civil Grand Jury recommends the following:

R1. Create a comprehensive, countywide vegetation management plan that includes vegetation along evacuation routes, a campaign to mobilize public participation, and low-income subsidies.

This recommendation requires further analysis.

Through a coordinated and collaborated approach the Marin cities, towns, County and fire agencies are drafting a plan for this recommendation, through use of existing funding resources where available, and a county wide wildland initiative. This initiative includes but not limited to:

Vegetation Management and fire fuel reduction

Defensible space home evaluations & education

Evacuation planning, public education, Firewise community support,

Alert and Warning enhancements

Pursuit of grant funds for countywide efforts as well as grant funding for Seniors, financially disadvantaged and those with access and functional needs (populations most impacted by recent mega fires).

In November 2018 the citizens of the Southern Marin Fire District passed a parcel tax. Approximately one-third of the revenues generated from this tax measure have been dedicated to wildfire risk reduction programs and services beginning with the 2019/2020 Fiscal Budget.

Regional funding may be pursued after public input with a potential ballot initiative in March of 2020.

R2. Hire at least 30 new civilian vegetation inspectors and at least eight fire/fuels crews focused on fuel reduction in the high-risk areas of the county, including federal, state and local public lands.

This recommendation requires further analysis.

Through a coordinated and collaborative approach, the Marin cities, towns, County and fire agencies have been assessing addressing this recommendation through a countywide wildland initiative.

Fire Prevention officers throughout the county are working on a countywide streamlined approach updating codes and processes with streamlined implementation and enforcement.

Agencies agree defensible space evaluations and face to face public education are essential for overall success. Working groups of Fire Chiefs, City Managers, County Executives are weighing options to ensure the most appropriate and cost-effective solution is proposed.

In November 2018 the citizens of the Southern Marin Fire District passed a parcel tax. Approximately one-third of the revenues generated from this tax measure have been dedicated to wildfire risk reduction programs and services beginning with the 2019/2020 Fiscal Budget.

It is possible that regional funding will be pursued after public input with a potential ballot initiative in March of 2020.

R3. Develop and implement a fast, streamlined procedure to enforce vegetation citations.

This recommendation requires further analysis.

Through a coordinated and collaborative approach, the Marin cities, towns, County and fire agencies are addressing this recommendation through a countywide wildland initiative. Fire Prevention officers throughout the county are working on a countywide streamlined approach updating codes and processes. It is the intention of the group to implement some items as part of regular code adoption cycle this fall. Larger scale collaboration and a more streamlined approach will be addressed as part of the Countywide wildland fire initiative.

In November 2018 the citizens of the Southern Marin Fire District passed a parcel tax. Approximately one-third of the revenues generated from this tax measure have been dedicated to wildfire risk reduction programs and services beginning with the 2019/2020 Fiscal Budget.

It is possible that regional funding will be pursued after public input with a potential ballot initiative in March of 2020.

R4. Adopt and deliver a comprehensive education program focused on action for all residents of Marin on a regular schedule by a team of expert trainers.

This recommendation requires further analysis.

Through a coordinated and collaborated approach the Marin cities, towns, County and fire agencies are addressing this recommendation through a county wide wildland initiative. This initiative includes but not limited to:

Defensible space home evaluations & education

Evacuation planning, public education, Firewise community support, support of Fire Safe Marin Alert and Warning enhancements and education

In November 2018 the citizens of the Southern Marin Fire District passed a parcel tax. Approximately one-third of the revenues generated from this tax measure have been dedicated to wildfire risk reduction programs and services beginning with the 2019/2020 Fiscal Budget.

Regional funding may be pursued after public input with a potential ballot initiative in March of 2020. Without additional resources any efforts to expand public education will be insufficient.

R5. Promote the creation of Firewise Communities in every neighborhood by all local jurisdictions.

This recommendation has already been implemented

Through a coordinated and collaborated approach the Marin cities, towns, County and fire agencies are addressing this recommendation through a county wide wildland initiative. This initiative includes but not limited to:

- Firewise community support,
- Support and funding for Fire Safe Marin
- Public education

In November 2018 the citizens of the Southern Marin Fire District passed a parcel tax. Approximately one-third of the revenues generated from this tax measure have been dedicated to wildfire risk reduction programs and services beginning with the 2019/2020 Fiscal Budget.

Regional funding may be pursued after public input with a potential ballot initiative in March of 2020. Without additional resources any efforts to expand Firewise communities will be insufficient.

R6. Employ individuals with skills in public speaking, teaching, curriculum design, graphics, web design, advertising, community organization, community relations, and diplomacy to educate the public.

This recommendation has already been implemented

Through a coordinated and collaborated approach the Marin County cities and towns are addressing this recommendation through a county wide wildland initiative.

Through a coordinated and collaborated approach the Marin cities, towns, County and fire agencies are addressing this recommendation through a county wide wildland initiative. This initiative includes but not limited to:

- Defensible space home evaluations & education
- Evacuation planning, public education, Firewise community support, support of Fire Safe Marin
- Alert and Warning enhancements and education

In November 2018 the citizens of the Southern Marin Fire District passed a parcel tax. Approximately one-third of the revenues generated from this tax measure have been dedicated to wildfire risk reduction programs and services beginning with the 2019/2020 Fiscal Budget.

Regional funding may be pursued after public input with a potential ballot initiative in March of 2020. Without additional resources any efforts to expand public education will be insufficient.

R7. Collect Marin residents' information and add it to Alert Marin and Nixle databases to make them opt-out systems.

This recommendation requires further analysis.

This recommendation would require changes in State law. We will work with legislators to support bills like SB 46 (Hueso; 2019), which would allow local governments to enter into agreements to access resident cell phone contact information for enrolling county residents in a county-operated public emergency warning system. We are also pursuing newly available authority to cooperate with utility companies to obtain customer data for these purposes, but state legislation would be needed to obtain cell phone contact information.

R8. Expand the use of sirens with LRADs.

This recommendation requires further analysis.

Sirens and LRAD’s have limited reach and limited ability to be heard inside a building. Local testing has provided mixed results based on topography and other outdoor existing noise. This type of system does have valuable application in some areas within the County. Some communities are moving forward replacing existing sirens with LRAD’s and or expanding the use of sirens or LRAD’s where appropriate.

In November 2018 the citizens of the Southern Marin Fire District passed a parcel tax. Approximately one-third of the revenues generated from this tax measure have been dedicated to wildfire risk reduction programs and services beginning with the 2019/2020 Fiscal Budget. The Southern Marin Fire District is currently assessing the benefits and limitations of an LRAD system.

Regional funding may be pursued after public input with a potential ballot initiative in March of 2020.

R9. Research, develop, and publish plans for the mass movement of populations along designated evacuation routes.

This recommendation requires further analysis.

Large scale evacuation planning needs to identify which corridors would benefit greatest from contra-flow. The use of experts in this field specifically universities studying this concept should be engaged. Coordination with public works agencies will be a critical component to our success.

Sausalito City and Southern Marin Fire District Public Safety Staff have worked closely with county staff in developing the Mutual Threat Zone (MTZ) maps, including various evacuation routes. Generally speaking, evacuation routes are guidelines which must be flexible based on the circumstances at the time of a critical incident. As conditions change in real time during an incident, routes and plans change to keep evacuees out of harm’s way. While evacuation route planning is essential, current information on environmental conditions during an incident will be the ultimate determiner of safe routes and safe locations for staging evacuees.

City and District staff offer numerous community outreach and training events to help residents be better prepared for a disaster. This includes information on evacuation routes and the

importance of knowing at least two ways out of their neighborhoods. Residents are encouraged to drive or walk alternate routes on a regular basis. The City also looking to expand outreach relating to areas of refuge and helping residents identify areas that may be safe to wait out a fire until a safer evacuation is possible.

In November 2018 the citizens of the Southern Marin Fire District passed a parcel tax. Approximately one-third of the revenues generated from this tax measure have been dedicated to wildfire risk reduction programs and services beginning with the 2019/2020 Fiscal Budget.

Regional funding may be pursued after public input with a potential ballot initiative in March of 2020. Without additional resources any efforts to expand public education will be insufficient.

R10. Give the highest priority to mitigating known choke points and to maximizing the capacity of existing evacuation routes.

Large scale evacuation planning needs to identify “choke points”. The use of experts in this field specifically universities studying this concept should be engaged. Coordination with public works agencies will be a critical component to our success.

In November 2018 the citizens of the Southern Marin Fire District passed a parcel tax. Approximately one-third of the revenues generated from this tax measure have been dedicated to wildfire risk reduction programs and services beginning with the 2019/2020 Fiscal Budget.

Regional funding may be pursued after public input with a potential ballot initiative in March of 2020. Without additional resources any efforts to expand public education will be insufficient.

R11. Incorporate and prioritize plans for mass evacuations in all pending and future traffic/road projects along major escape routes.

This recommendation requires further analysis.

Consideration of mass evacuations is an important element for agencies to add to their assessment of road-related capital projects. However, prioritizing evacuation plans above all other considerations may lead to design decisions that impair other important considerations, such as safe use of roads on a daily basis. A balanced lifestyle of each project is required.

R12. Educate, prepare, and drill for evacuations in all communities.

This recommendation has been implemented.

The Southern Marin Fire District places a high value on educating, preparing and drilling the community. We have been conducting community evacuation drills for the past 4 years. The drills are often coupled with a video and handout materials to inform residents who are not able to participate.

R13. Fully integrate public transit into the MERA communications system without further delay.

This recommendation requires further analysis.

The member agencies of MERA welcome the addition of transit agencies serving Marin. It will be necessary to analyze how to integrate these agencies in a manner that is fair and equitable.

R15. Establish in the form of a Joint Powers Authority an umbrella organization for wildfire planning and preparedness (vegetation management, public education, alerts, and evacuation), funded by a ¼ cent sales tax.

This recommendation requires further analysis.

The Marin cities, towns, fire agencies and County are addressing this recommendation with a working group to explore the creation of a countywide wildfire prevention program governed by a countywide joint power authority. The program scope for ongoing, locally-controlled, countywide wildfire prevention program would include the following:

- Fire fuel reduction and vegetation management
- Defensible-space home evaluations and education
- Evacuation planning and neighborhood preparedness
- Alert and warning enhancements
- Pursuit of grant funds for countywide efforts, as well as grant funding to assist seniors,

financially disadvantaged and those with access and functional needs with preparedness measures.

This program would require new, ongoing funding. We are currently exploring a potential countywide parcel tax measure in March 2020. Based on our feedback from Marin fire-responsible agencies, we believe that a parcel tax is the appropriate funding mechanism.

In addition, we believe the Grand Jury’s recommendation may have been based on their assumption that “each jurisdiction would have to pass exactly the same parcel tax measure for the same amount at the same time.” It is worth noting that, based on the support of agencies that are responsible for fire suppression, it is allowable for the Board of Supervisors to place a single, countywide parcel tax measure on the ballot. A recent example is Measure A on the November 4, 2014 countywide ballot, which implemented a countywide parcel tax for the Marin Emergency Radio Authority (MERA). Therefore, the results of a countywide measure would require a two-thirds support countywide but would not require two-thirds support in each jurisdiction.
