OUR WATER — OUR WORLD

Sixteen local stores partner with the Marin County Stormwater Pollution Prevention Program (MCSTOPPP) to help inform their customers about less-toxic pest-management products. Staff in the following stores can assist you in choosing products that are better for your, your pets, and the environment:

• Ace Building Supply Center, Pt. Reyes Station
• Bayside Garden Center, Belvedere
• Fairfax Lumber & Hardware, Fairfax
• Goodman Building Supply, Mill Valley
• The Home Depot, San Rafael
• Jackson’s Hardware, San Rafael
• Marin Ace Hardware, San Rafael
• Orchard Supply Hardware, San Rafael
• Pini Ace Hardware, Novato
• Sloat Garden Centers, Kentfield, Mill Valley, Novato, San Rafael
• Sunnyside Nursery, San Anselmo
• Toby’s Feed Barn, Pt. Reyes Station

Pesticide-free gardens are welcome havens for honeybees. K. Jones

CHOOSE A BAY-FRIENDLY LANDSCAPER!

MCSTOPPP and the Marin Municipal Water District have trained more than 140 landscape professionals through the 20-hour Bay-Friendly Professional Landscape Maintenance Training and Qualification Program. Graduates of the Bay-Friendly program in Marin County can help you create a landscape that protects our creeks, bays, and ocean. For a list of Marin’s Bay-Friendly-qualified professional landscapers, and to learn more about Bay-Friendly gardening, visit www.bayfriendlypro.org.

Marin’s coho salmon hatch and live in the Lagunitas Creek watershed for one to two years, then migrate out to sea. At age three, they return to their home tributary to spawn. Last spring’s migration of 20,000 juvenile coho from Lagunitas Creek was the largest recorded since 2006. Protecting and restoring local water quality and creek habitat is critical to the survival of these ancient, federally endangered fish.

The Lagunitas Creek watershed is home to the largest remaining wild run of coho salmon on the Central California coast.

Large, woody debris provides resting and hiding places for fish. These debris structures in Lagunitas Creek help restore critical habitat.
To respect fish nurseries, stay out of creeks when fish are laying eggs and/or hatching (October through May).

Fine sediment can smother fish eggs and fill in deep pools needed for fish survival. To help reduce erosion in creeks, direct stormwater on your property to landscaped areas, and use mulch to keep soil in place.

Native plants provide food and shelter for young fish. Maintain existing native vegetation along creeks. Plant native trees and shrubs where soil is exposed to help stabilize creek banks.

Before placing anything in, over, or near a creek or its banks, contact MCSTOPP (mcstoppp@marincounty.org) for information on permits and creek-setback requirements.

Develop Fish-Friendly Habits

★ To respect fish nurseries, stay out of creeks when fish are laying eggs and/or hatching (October through May).
★ Fine sediment can smother fish eggs and fill in deep pools needed for fish survival. To help reduce erosion in creeks, direct stormwater on your property to landscaped areas, and use mulch to keep soil in place.
★ Native plants provide food and shelter for young fish. Maintain existing native vegetation along creeks. Plant native trees and shrubs where soil is exposed to help stabilize creek banks.
★ Before placing anything in, over, or near a creek or its banks, contact MCSTOPP (mcstoppp@marincounty.org) for information on permits and creek-setback requirements.

Watch a video from the State Water Resources Control Board on how to manage stormwater on your property: www.waterboards.ca.gov/stormfilm/slow_the_flow.shtml.
Letting It Soak In

One inch of rain falling on a 1,000-square-foot roof equals approximately 600 gallons of usable water! Redirecting this water to a rain barrel or cistern makes it available for later use in the garden. Alternatively, routing this water to a landscaped area or to a rain garden allows it to seep into the ground, where it eventually flows into local creeks, providing cool water for local animals during the warm summer months.

Divert the water from your roof to your garden with an ordinary downspout or a work of art.
Runoff during storms carries pollutants and can erode streams. Rethink drainage to prevent this.

- Disconnect downspouts to let water run off your roof onto a splash block and into landscaped areas.
- Slow down your roof runoff by connecting rain chains to your roof gutters.
- Use mulch on plant beds to slow the flow in areas where water can seep in.
- Consider planting a rain garden. For guidance, visit www.mcstoppp.org and look under General Public, then Informational Brochures and Rainwater Management at Home.

Replacing a paved patio or driveway with permeable features allows water to soak into the ground.

A slim water-storage tank will fit against the wall in many places around your home. It can even be installed flat under a deck.

Learn More
Ready to disconnect your downspouts? Get information and instructions by watching Make the Water Go—Disconnecting Downspouts on YouTube.
Consider selecting cleaning products for your home that are approved by the U.S. Environmental Protection Agency's Safer Product Labeling Program. Products with the “Design for the Environment” label have been reviewed to ensure the ingredients are safer for you, your family, and the environment. A list of products meeting these qualifications can be found at www.epa.gov/dfe/products.

Peppermint oil has air-freshening properties. Add it to your favorite homemade spray.

Essential oil from lavender is often added to homemade cleaning solutions to provide a pleasant scent without the use of artificial fragrances.
Safer, effective cleaners can be made using simple and inexpensive ingredients like lemon juice, vinegar, and baking soda.

### Make Your Own Nontoxic Cleaners

Did you know wastewater-treatment systems generally aren’t designed to remove synthetic chemicals used in household cleaning products? Low levels of these chemicals may eventually end up in the bay.

You can help the environment by making your own cleaning products with simple ingredients, such as white vinegar, baking soda, lemon juice, and mild (e.g., castile) soap.

Another alternative to cleaning chemicals is to use microfiber cloths—either dry or with water. These cloths are designed to trap dirt, grease, and dust. A high-quality cloth can last for many years.

Learn More

Get more information on environmentally preferable cleaners and links to recipes for making your own cleaning solutions; Go to zerowastemarin.org/zero-waste-101/less-toxic-alternatives.
Did you know that 41% of the materials found in the waste stream are organic and compostable? By composting, you keep organic materials out of the landfill and return them to their natural environment. Composted materials added to soil as an amendment improve soil quality, help it retain moisture, and provide nourishment to plants.

Use a compost turner, pitchfork, or shovel to aerate your pile every two weeks by mixing up the contents, as if you were tossing a salad.

Good compost is the secret to the lush and highly productive vegetable gardens at the Larkspur Community Garden.
**Tips for Your Backyard Compost Pile**

- To speed up the composting cycle, place your compost bin in an area that will receive full sun.
- Transfer organic waste (banana peels, egg shells, coffee grounds, apple cores, etc.) to your backyard compost pile as often as possible.
- Add grass clippings, raked leaves, and wood chips from landscaping.
- Don’t add materials that have been treated with pesticides and/or herbicides to your compost bin.
- Don’t add meat scraps, fish bones, bacon fat, pet waste, or diseased plants. These materials may attract pests and spread disease.
- Place food scraps that you can’t compost at home (meat, pizza boxes) in your green yard-waste bin. Check Who Is My Hauler at www.zerowastemarin.org to see what items your trash hauler accepts.

---

Zero Waste Marin provides free food-scare shuttles to Marin residents. Check out www.zerowastemarin.org/compost to find out about shuttles and free composting courses.

---

Take Action

Reduce your waste by adding your newspaper to the compost bin. It is best to shred it to speed up the composting process. Better yet, switch to online newspapers and eliminate this waste stream.
Marin County is located within the Pacific Flyway, a migration path stretching from Alaska to Central America traversed by a billion birds each year. Marin’s creeks and gardens provide food, water, and shelter that migratory birds need to thrive along the way.

Nearly 500 bird species have been observed at the Palomarin Field Station, a renowned migratory-bird research and teaching facility at Point Reyes. Researchers there band birds to track migration paths, and visitors observe bird-banding demonstrations.

The brilliant blue of a male indigo bunting is a treat to see during spring and fall migration time.
Habitat protection is the primary way to prevent the decline of many migratory bird species. You can help by creating wildlife habitat in your backyard.

- Plant a diversity of native species growing at different heights. Visit www.marin.edu/cnps/birds.html for more information on what to plant.
- Encourage neighbors to plant bird-friendly native plants to create a travel corridor and provide migratory birds with more space to eat, rest, and nest.
- Avoid mowing, pruning, or moving vegetation next to creeks or any active nests during nesting season (March through July), and never remove native creekside vegetation.
- Seek out the least-toxic alternatives to pesticides. Visit www.ourwaterourworld.org.

Learn which native plants attract birds to your garden! Visit www.mcstoppp.org or contact the Marin County Stormwater Pollution Prevention Program at (415) 473-6583 or mcstoppp@marincounty.org and request a free copy of “Go Native.”

Plant shrubs such as yellow willow (left), elderberry (right), or salmonberry (above) that provide shelter and food for birds.
Whether you have a custom hot rod, a classic VW Bug, or a car you just love to see shine, you can wash your car wisely to save water and protect creeks. When allowed to run down the street, the wash water carries everything that was on the car—dirt, metals, and oil—into local creeks. When possible, take your car to a commercial car wash to save water and protect water quality in your local creeks.
Father’s Day
Summer begins
Ramadan begins at sunset

Water-Wise Washing Tips

⭐ Conserve water—use a hose with a shut-off nozzle.
⭐ When you wash your car at home, choose a spot where the water can soak into the ground instead of running into a storm drain. This serves two purposes—cleaning your car and watering your landscape!
⭐ Soap, including biodegradable soap, can hurt fish in our creeks and bays.

Planning a car wash fundraiser? Borrow a creek-friendly car wash kit from MCSTOPPP. Call (415) 473-6583.

Learn More
Download a copy of “Car Washing—the Fish Friendly Way.” Go to www.MCSTOPPP.org and click on General Public, then Informational Brochures.
Cherished pets and companions, our dogs are part of our families, but they aren’t part of our local natural environment. To protect local water quality and the native creatures of our beautiful region, bag your pet’s waste and throw it away in the trash. Pet waste won’t fertilize the plants, and it can harm our creeks and beaches.

While enjoying one of Marin’s many dog-friendly hikes, remember to always pick up and pack out.

There are many local dog parks and open-space fire roads to sniff out in Marin.
Thanks for disposing of pet waste in the trash! Remember, it is illegal to hose pet waste into storm drains.

Because pet waste is not fertilizer, take care to keep it out of your compost and remove it from your local park.

Recycle! You can reuse plastic bags to pick “it” up.

Keep a few bags near your dog’s leash, and grab one as you and your furry friend head out.

Please don’t flush kitty litter. Cats may carry disease that can’t be removed at the treatment facility and can spread to sea otters.

Horse owners are encouraged to visit www.mcstoppp.org for information on creek-friendly manure management.

Equestrian facilities in West Marin can contact West Marin Compost for information on their bedding and manure composting program.

Western snowy plovers nest on local beaches. Help protect these threatened birds by respecting leash laws.

Learn More

Ready to hit the outdoors with Fido? Check out www.dogfriendly.com for a comprehensive guide to dog-friendly locations in Marin and the North Bay.
In California, only one in five do-it-yourself oil changers recycles their oil. About 98 million gallons of oil is recycled statewide annually, which is re-refined and available in auto parts stores as conventional and synthetic blends. Buying re-refined oil is more environmentally friendly and often less expensive; it can be found in five-quart jugs for $3 per quart. So if you like to get your hands dirty, remember to recycle your used oil and filters!
Zero Waste Marin provides Marin residents with everything they need to safely recycle used motor oil and filters. The free kit includes a collection jug that doubles as a drain pan, a funnel, an oil-filter drainer, latex gloves, shop towels, and information on oil recycling locations. Check out www.zerowastemarin.org/MOFR for tips, special promotions, and recycling opportunities.

Remember:
- Never pour used oil onto the ground, into a storm drain, or down a sanitary-sewer drain!
- Find out how frequently you need to change your oil. Google “check your number” to find out your vehicle’s recommended oil-change interval.
- Choose re-refined oil for your oil changes. Shop around and put in a special order, if needed.

Get a Free Oil-Change Kit

Cost-Saving Tip

Change your oil when necessary, not just at that mythical 3,000-mile mark.
Volunteers are contributing their time and energy to keep Marin litter-free! In September 2013, Marin County parks volunteers spent 1,033 hours picking up trash, restoring habitat, and removing non-native plants in the county. On Coastal Cleanup Day in 2013, 988 volunteers county-wide collected 4,635 pounds of trash and 998 pounds of recyclables. These impressive efforts help keep the local waterways beautiful for all to enjoy.

In one year, one person collected enough plastic water bottles on the beach at Point Reyes to make five nine-foot-high sculptures of our abandoned trash.
Did you know that people are less likely to litter in clean areas than in already-littered areas? You may have a positive influence on other people’s behavior by simply picking up litter and placing it where it belongs—in the trash or recycling bin.

Municipalities, local creek groups, and other volunteers clean up creeks throughout the year. See the inside cover of this calendar for information on joining a local creek group! Or join one of Marin’s litter-abatement groups, including

- San Rafael Clean: email carla.koop@cityofsanrafael.org
- Clean Mill Valley: email locustmv@pacbell.net, or visit www.cleanmv.org
- City of Novato Streetscape Maintenance Coalition: email streetscapecoalition@novato.org

Volunteers provide an important service by remediating wetlands (left) and removing trash along the Sausalito/Mill Valley multi-use pathway (right).

Volunteer to Keep Our Streets and Creeks Litter-Free

Help keep trash out of our local creeks and the Pacific Ocean! Volunteer on California Coastal Cleanup Day. Go to www.coastalcleanupday.org.
Lose Your Lawn

Fall is a perfect time to replace thirsty turf with beautiful native and drought-tolerant plants, as winter rains will help your new plants get established. It’s an easy way to save thousands of gallons of water every year. Replacing your lawn has other benefits, including creating habitat for birds and beneficial insects, reducing the need for fertilizers and pesticides, saving fossil fuels needed to power mowers and edgers, and adding color and interest to your garden.

Turn your unused lawn into a productive space for growing your own local, organic food and more.

Lose your lawn to make space for colorful, water-wise plantings.
Sheet mulching is a simple and inexpensive way to replace unwanted turf grass. In this layered mulch system, a biodegradable weed barrier (such as cardboard or newspapers) is placed over the existing lawn and topped with a thick layer of mulch. Over time, the old lawn and other layers decompose, enriching the soil and becoming food for new plantings.

Following sheet mulching, this lawn in Bel Marin Keys became a lovely garden by the following summer.

Learn More

MARIN MUNICIPAL WATER DISTRICT
Marin’s wastewater-treatment plants protect the health of residents and the environment by cleaning and treating wastewater from showers, sinks, toilets, and other indoor drains before it is discharged to the bay. Products like herbicides, pesticides, solvents, and pharmaceuticals should never be flushed down toilets or other drains. Some of the chemicals in them pass right through the treatment plant and enter our local waterways.

Protect the beauty and health of the bay by properly disposing of wastes.

Bring pharmaceuticals and controlled substances to one of many Marin locations for disposal (see back cover).
To keep them out of the bay, residents and businesses must take pesticides, herbicides, paints, pool/spa chemicals, cleaners, copper algaecides, copper root-control chemicals, cyanide, and polychlorinated biphenyls (PCBs) to a local hazardous-waste facility (see back cover).

Exchange your mercury thermometer for a digital thermometer! Call 1-800-SAV-R-BAY for more information.

Fluorescent tubes can also be brought to a local hazardous-waste facility or taken to the Bulb and Battery TakeBack Program (households only). Learn more at www.zerowastemarin.org/bnb.

Fats, oil, and grease clog pipes and should be kept out of drains. Keep your system flowing by properly disposing of food grease.

“Flushable” wipes cause sewer pipes to clog and should not be flushed.

Dispose of It Right

Learn More

Use the information in this calendar to find out how to properly dispose of or recycle excess chemicals and medicines. Visit www.savrbay.com for more information on disposal or to find out more about wastewater treatment in Marin.
Protecting the soil on your property helps protect water quality, fish, and bugs in our local creeks! If you are planning a construction project or any activity that disturbs soil, include erosion and sediment control as part of the project so that soil remains in place. Exposed soil is a significant source of sediment that can harm fish in our local creeks by smothering their eggs and making it harder for them to breathe and find food.

Use blankets and fiber rolls that are made of natural fibers and that don’t contain plastic nets, which could trap wildlife.

The clarity of the creeks in Marin depends on smart landscaping and construction practices that control sediment runoff.
Ask your contractor to use erosion- and sediment-control practices. Erosion control protects soil as a resource. Sediment control, a second line of defense, catches soil after it has washed off.

Check local requirements for erosion control when planning a project.

Use wildlife-friendly erosion-control products that minimize the risk of trapping small animals.

Whenever possible, plan ground-disturbing work for nonrainy periods.

Revegetate disturbed areas as soon as possible to prevent erosion.

If you’re planning work in or near a creek or ditch, you may need special permits first. Call (415) 473-6583 for information and guidance.

Planning a Remodel or New Construction?

Learn More

Learn more about why it is important to value and protect soil as a resource by watching the YouTube video Soils—Digging Up the Dirt on Soil.
DISPOSAL of USED MOTOR OIL AND FILTERS

The following locations accept used motor oil, filters, batteries, and antifreeze as indicated. Call centers for hours of operation and quantities accepted.

- Do NOT mix used oil with any other substance, including antifreeze. Doing so may mean the used oil can’t be recycled. Keep used motor oil in a separate container.
- If your oil is contaminated with another substance, bring it to your local hazardous waste facility.

**KEY CODE:**

- O = Used motor oil
- F = Oil filters
- A = Antifreeze
- B = Car batteries

### DISPOSAL of HOUSEHOLD HAZARDOUS WASTE (HHW)

Household hazardous waste such as TVs, computer monitors, pesticides, paint, antifreeze, used oil and filters, aerosol sprays, fluorescent tubes, and solvents can be brought to the facilities listed below. No fees are charged for residential drop-off.

- Items not accepted include explosives, ammunition (call the police department), radiocative, compressed-gas cylinders (BBQ propane cylinders are accepted), bio-waste, infectious waste, and laboratory waste.
- For disposal of pharmaceuticals, sharps, syringes, and controlled substances, look elsewhere on this page. If you are unsure whether an item will be accepted, call first.

**ALL OF MARIN (Except Novato)**

- Marin Household Hazardous Waste Facility
  - Address: 565 Jacoby Street, San Rafael. 485-6806
  - Funded by the Marin County Solid and Hazardous Waste Joint Powers Authority

  *Open Tuesday–Saturday, 8:00 a.m.–3:30 p.m.*

  *Toric Away Days: Once-a-year, one-day 40-car-by-appointment events will be held at Bolinas, Point Reyes, and Woodacre. Call 485-3309 for dates.*

**NOVATO RESIDENTS ONLY**

- Novato Household Hazardous Waste Facility
  - Address: 7576 Redwood Blvd., Novato. 892-7344
  - Funded by Novato Sanitary District and City of Novato

  *Open 8:30 a.m.–1:30 p.m. on the 1st and 3rd Sundays and Mondays of each month.*

  For more information, call 892-7344 or go to www.novatosan.com.

**BUSINESS HAZARDOUS WASTE**

Businesses generating very small amounts of hazardous waste can use the Household Hazardous Waste Facility in San Rafael or Novato by appointment. A fee will be charged at both facilities. To participate, a business must acquire and provide an EPA ID number. Numbers can be obtained at 1-800-668-6942, or get Form 1338 at www.dtsc.ca.gov/IDManifest/ID_Numbers.cfm.

For Novato, call 892-6395

For San Rafael, call 458-5549
