

1. Integration points. We would like to eliminate 4 integration points. Our team (justice team) decided we don't need these integration points.
 - a. I07 – Link person
 - b. I06 – Unlink person
 - c. I21 – New person to Tiburon
 - d. I22 – New person to Marin
2. EJUS link from Tiburon. This functionality allows Sheriff's users to open EJUS on specific page bypassing EJUS login screen. Currently you have 4 different ways to search in EJUS:
 - a. Search and Seizure by MNI (opens person page in Ejus)
 - b. Court Information by Court Case Number
 - c. Complaint Status by Incident Number and Agency
 - d. Probation Address Search by Address

Search and Seizure is very popular search that is used most often. Other 3 searches are used very rarely. Do you want to leave all 4 searches in the new system?

Please see attached file with a search statistics from the last 6 months broken by Agency and user name. Let me know if you want statistics for more than 6 month.
3. Psych Evals (JOOF) integration. We are not going to be able to create this as adhoc integration point in the new system. You will need to request vendor to create "official" integration point.

Here is how we currently assign MNI's:

1. CJIS (Court system) – MNI range: 0-3,000,000
2. Tiburon – MNI range: 3,000,000-6,000,000
3. Darwin (DA system) – MNI range: 6,000,000-7,000,000
4. Juris (Court minor offense (traffic) system) – MNI range: 7,000,000-9,000,000
5. Prism (Probation system) – MNI range: 9,000,000-9,999,999
